

PERMAVOID

ATHLETIC FIELDS

Protects expensive synthetic infill turf fields by maximizing permeability and water storage preventing flotation forces.

Eliminates consolidation and settlement concerns through high strength interconnected units and load distribution.

Passive irrigation allows the classic look and feel of natural turf without costly irrigation.

Provides the ideal base for precision graded athletic fields for all levels of play.

Passive irrigation reduces stormwater runoff through natural and biological evaporation.

Maximizes field and overall site LID performance through storage and infiltration.

Eliminates collector pipe excavation and raw materials while increasing stormwater source control.
